What Are Amazon Gift Card Codes

Definition and Purpose

Amazon gift card codes are unique alphanumeric combinations that hold a specific monetary value. They can be entered on your Amazon account to add credit, which is then used to purchase products. These codes often come in 14 or 15-character strings and are tied to the currency and region in which they are issued.

How They Work on the Amazon Platform

Once a user enters an Amazon gift card code into their account, the balance is stored and used at checkout. If the purchase exceeds the available balance, the remaining amount is charged to another payment method. If the balance is more than the total, the rest remains in your Amazon account for future use.

Different Types of Amazon Gift Cards

Digital Amazon Gift Cards

These are the most common and are delivered instantly via email or directly to your Amazon account. They are perfect for last-minute gifts or for receiving rewards from online apps and programs.

Physical Amazon Gift Cards

These are actual plastic cards that you can purchase at retail locations. They are often available in checkout aisles at supermarkets and can be personalized for gifting.

Reloadable Amazon Balance Cards

Some users choose to buy reloadable cards and add funds as needed. These cards are tied to your Amazon account and can be refilled using various payment methods.

How to Get Amazon Gift Card Codes Legally

Earn Through Survey Sites

Websites such as Swagbucks, Toluna, and YouGov allow users to complete surveys in exchange for points. These points can be redeemed for Amazon gift card codes. While the payout per survey may be small, consistent participation can lead to substantial rewards over time.

Cashback apps like Rakuten and Dosh reward you with money for shopping through their platforms. That cashback can often be converted into Amazon gift cards, giving you another way to accumulate credits just by doing your regular shopping.
